Operationspolicy

Quality and environmental management refers to our ability to meet the requirements of our stakeholders regarding:

- Suitable products
- Reliable performance
- Fast and reliable deliveries
- Keeping our commitments and promised delivery times
- Personal service
- Reduced environmental impact in our processes
- Compliance with applicable legislation.

Our way of working is continuously focused on simplifying and improving routines and methods in both administration and production. Our goal is to perform all tasks with zero defects, thereby minimizing environmental impact and ensuring a high level of quality.

We shall also ensure compliance with applicable laws and regulations.

Everyone within MP bolagen has a responsibility for quality and environmental performance and shall be aware of the requirements applicable to their work. All employees shall have the necessary knowledge and resources to fulfil their responsibilities and be encouraged to initiate actions that prevent errors and promote continuous improvement.

Quality and environmental management cannot be achieved through supervision and control alone. It can only be achieved through the careful and responsible efforts of every employee and business partner.

The MP Group offsets its carbon emissions through extensive forest holdings that absorb carbon dioxide and by generating electricity from its own solar power installations.
