Quick guidance & material selection.

This brochure contains items available at wholesale distributors' central warehouses, installers' top choices, and the best-selling products according to our own statistics. The complete range is available in the MP catalog – order at info@mpbolagen.se.

Some of the accessories are specifically designed for C4 environments but also suitable for lower corrosion classes, reducing the number of items/stock locations.

Table for corrosivity classes.

Corrosivity class according to SS-EN ISO 12944-2, taking into account the corrosivity of the atmosphere and environment examples.

Corrosivity-class	Environment's corrosivity	Examples of typical environments in the temperate climate zone (informative).	
		Outdoor	Indoor
 C1	Very low		Heated areas with dry and insignificant amounts of contamination, for example, offices, shops, schools and hotels.
 C2	Low	Atmospheres with low content of air contamination Rural areas.	Non-heated areas with varying temperatures and humidity. Low frequency air of condensation and low levels of air contamination, for example, sports halls and warehouses.
 C3/C4	Moderate	Atmosphere with small quantities of salt or moderate amounts of air contamination. Urban areas and light industrial areas. Areas with some influence from the coast.	Areas with moderate humidity and some air contamination from production processes, for example, breweries, dairies and laundries.
	High	Atmosphere with a moderate quantity of salt or tangible quantities of air contamination, in industrial and coastal areas.	Areas with high humidity and large quantities of air contamination from production processes, for example, chemical plants, swimming pools.
 C5-I	Very high (industrial)	Industrial areas with high humidity and aggressive atmosphere.	Areas with almost permanent moisture condensation and large levels of air contamination.
 C5-M	Very high (marine)	Coastal and offshore areas with large amounts of salt.	Areas with almost permanent moisture condensation and large levels of air contamination.

Cable ladders MP-S and TS

Sendzimir 20 µm – Corrosivity class max C2

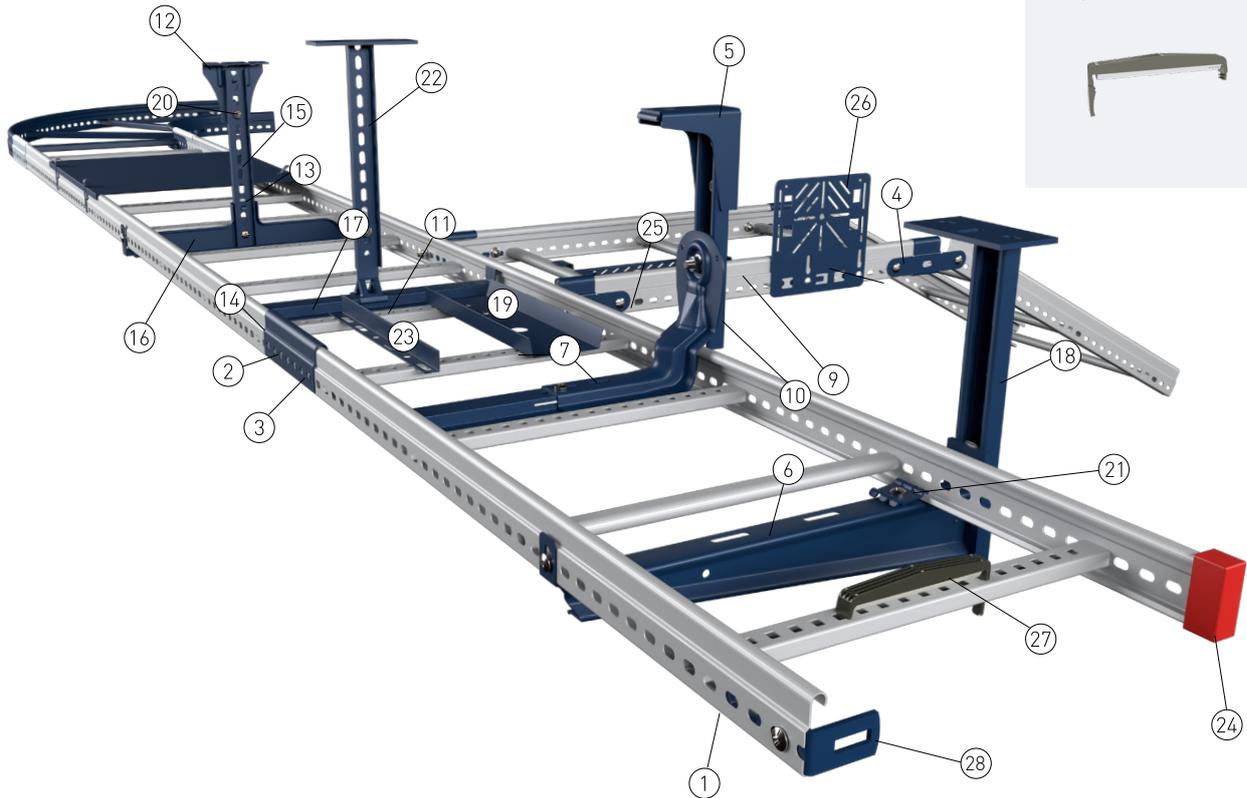

Choosing right Cable ladder!

MP-S Cable ladder with 20 µm Sendzimir coating and perforated rungs – rungs 2 and 4 are closed. MP-TS with 20 µm Sendzimir coating has closed rungs. Normal bracket spacing center-to-center is 2 meters. Manufactured and adapted for indoor use in corrosivity class up to C2 – read more on page 2. (Joint meets requirements for electrical continuity with a good margin).

MP-S is available in 3- and 6-meter lengths. MP-TS is available in 6-meter lengths.

Note!

Simplified Installation of Cables with a Diameter Between 5.5–13 mm
Cable clamp Stepps 15 221 40, with an inner dimension of 120 mm, is compatible with cable ladders featuring square holes and is made from recycled plastic.

Cable ladders MP-Z and Z4

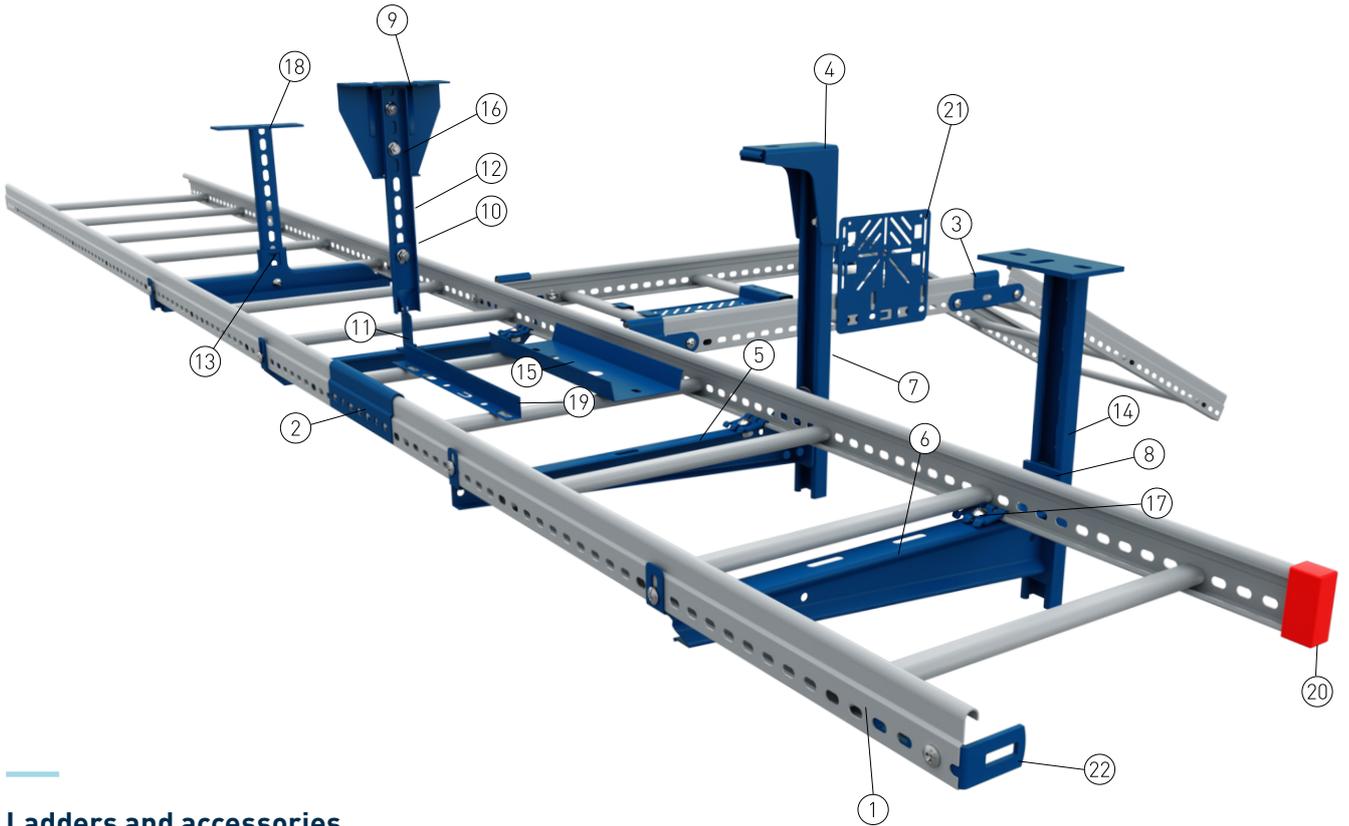

Z 60 µm and Z4 – Corrosivity class max C4

Choosing right Cable ladder!

Cable ladders MP-Z and Z4 with closed rungs. Normal bracket spacing center-to-center is 2 meters. All items on this page are adapted for a maximum corrosion class of C4. Read more about corrosion classes on page 2. (Joint meets requirements for electrical continuity with a good margin).

Note!

Z4 has a self-healing capability that makes the material resistant to various factors, including corrosion caused by scratches. Z4 can also be placed in alkaline environments!

Ladders and accessories.

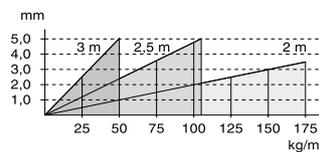

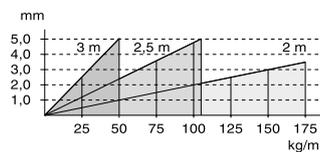

Ladder MP-Z	Length	Width

Cable ladders MP-FZ self supporting

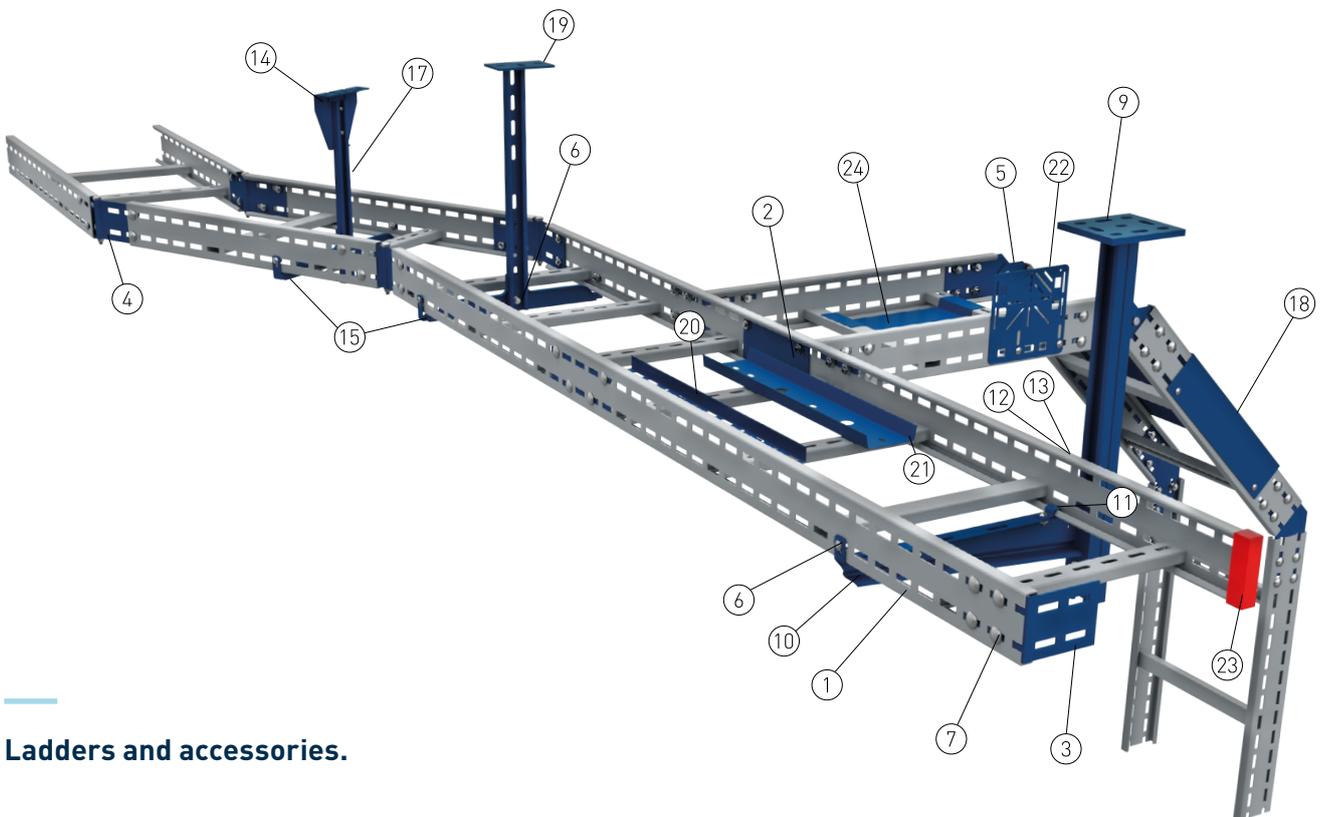

Hot-dip galvanized 60 µm – corrosion class max C4

Choosing right Cable ladder!

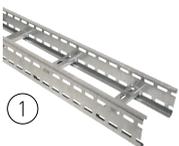

MP-FZ self supporting cable ladder is hot-dip galvanized with a coating of 60 µm. Manufactured and adapted for outdoor use, (corrosion class up to C4 – read more on page 2). The ladder is especially suitable for applications requiring long bracket spacings, both indoors and outdoors. Normal bracket spacing center-to-center is 6 meters. All accessories meet the corrosion class up to C4, unless otherwise stated. (Joint meets requirements for electrical continuity with a good margin.)

Note!

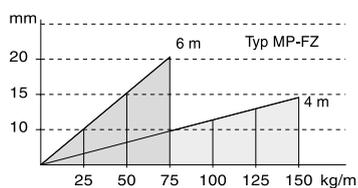

Angle bracket 11 153 90 is designed to better fit free-standing ladders and anchor rails.

Cable ladders – stainless steel

Stainless – corrosion class max C5I

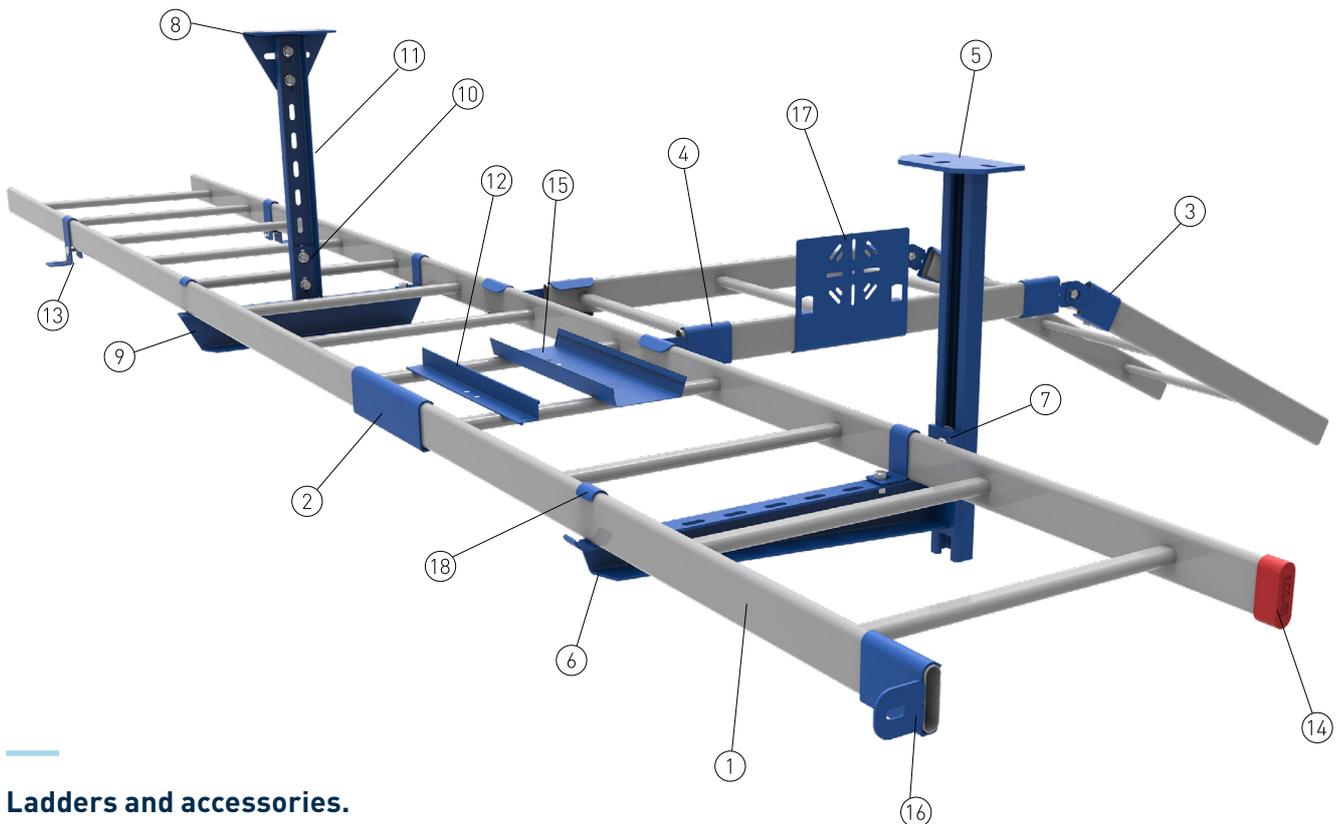

Choosing right Cable ladder!

Stainless steel cable ladders for environments with very high corrosivity. Normal bracket spacing center-to-center is 2 meters. Manufactured and adapted for outdoor use, (corrosion class up to C5I) – read more on page 2. (Joint meets requirements for electrical continuity with a good margin.)

Cable ladders in acid-resistant design - see the MP catalog!

Note!

In the MP range, there are also acid-resistant cable ladders approved for car and railway tunnels. Contact our sales representatives for further information - see page 28.

Wire mesh trays

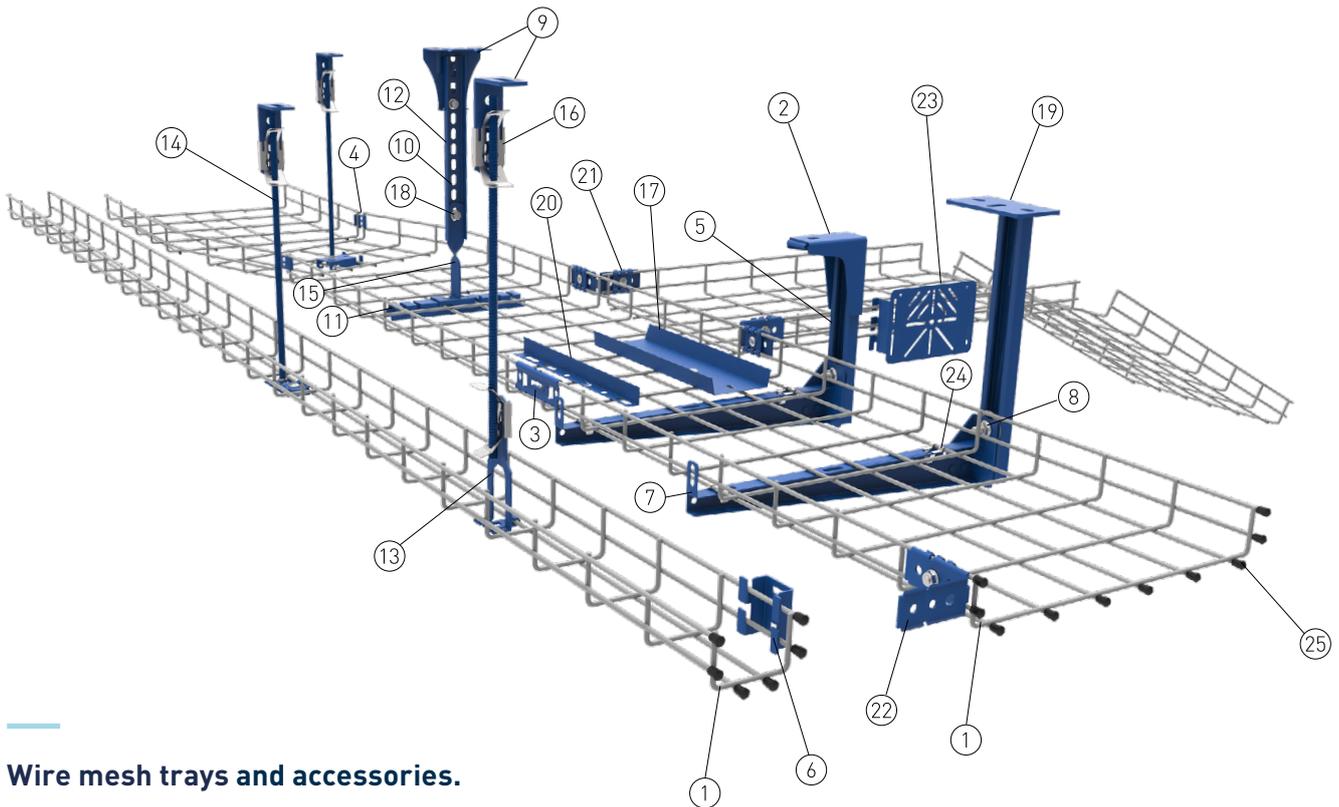

Electrogalvanized 10 µm/Z4 – corrosion class max C1/C4

Choosing right Wire mesh trays!

Wire mesh trays for both indoor and outdoor use – see page 2. Normal bracket spacing center-to-center is 2 meters. (Joint meets requirements for electrical continuity with a good margin.) Some accessories are specifically designed for C4 environments but are also suitable for lower corrosion classes, reducing the number of items/stock locations.

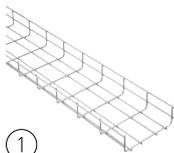

Note!

The new Wire mesh tray in Z4 material can withstand environments up to C4 – at an even lower price.

Wire mesh trays and accessories.

Luminaire rails/cable trays

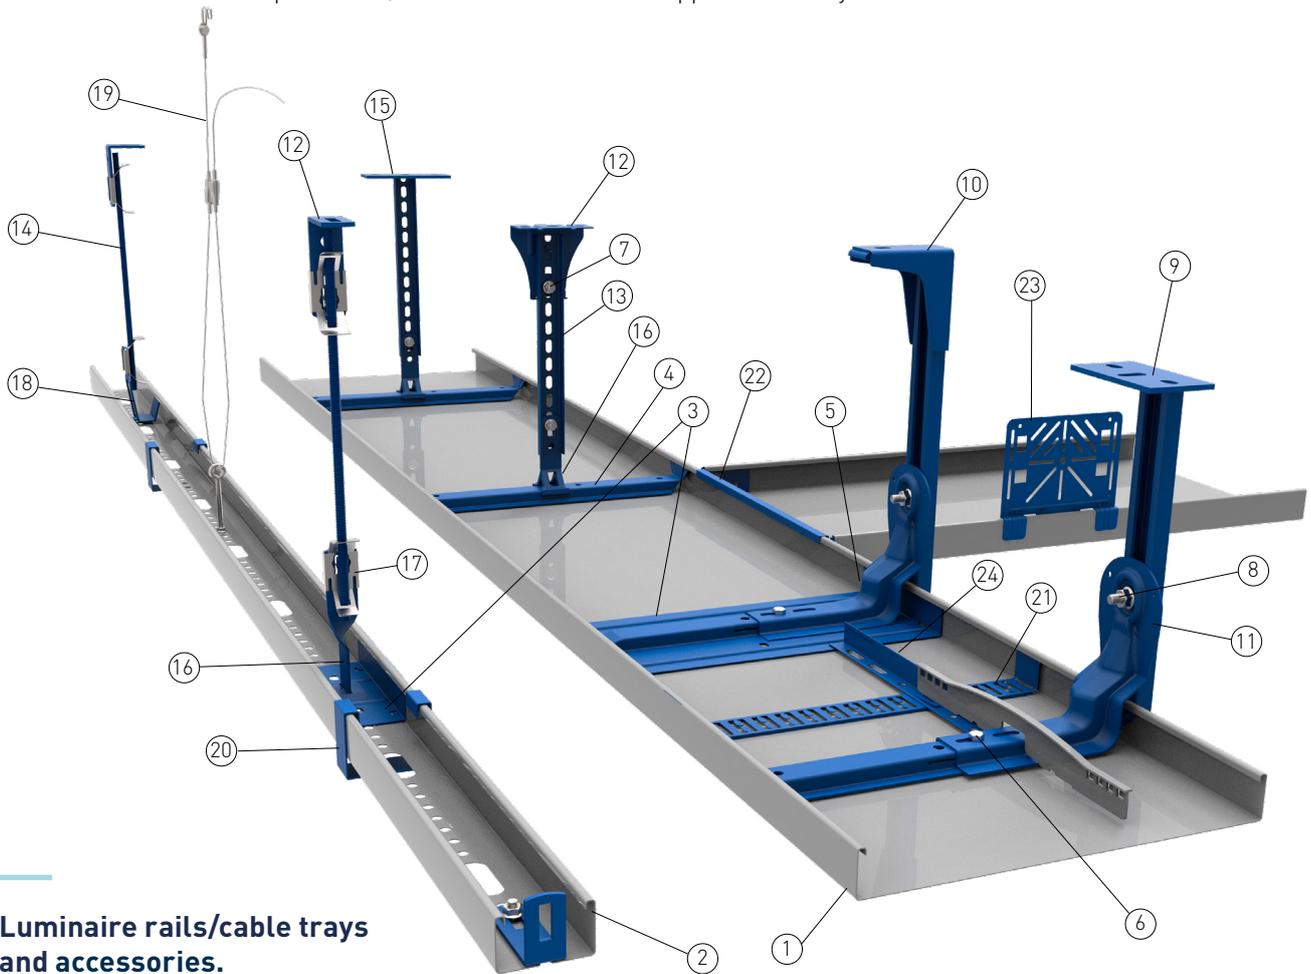

Sendzimir and White painted – corrosion class max C1 – C4

Choosing right luminaire rails/cable trays!

Luminaire rails and cable trays for indoor use. The 75 mm luminaire rails is available in Z4 (Part No. 11 170 63) for outdoor use – see page 2.

The splice come with built-in support for faster and easier installation and meet the requirements for electrical continuity with a good margin. Splices in 55 mm and 75 mm width have built-in friction locks. The calculated bracket spacing is determined by the length of the track – a two-meter track has a bracket spacing of 2 m, and a three-meter track has a 3 m bracket spacing. A six-meter luminaire rails requires a support in the middle. These apply under normal load.

Sendzimir is a corrosion protection, and variations in shade/appearance may occur.

Wall trunkings – Ductel 3 m

Aluminum wall trunking – white RAL9010/ black RAL9005

The wall trunkings are made of aluminum with a 45 mm or 80 mm opening. When mounted with a wall bracket, the normal bracket spacing is typically calculated at 1 m center-to-center. Joints meet the requirements for electrical continuity with a good margin. All channels have a perforated back.

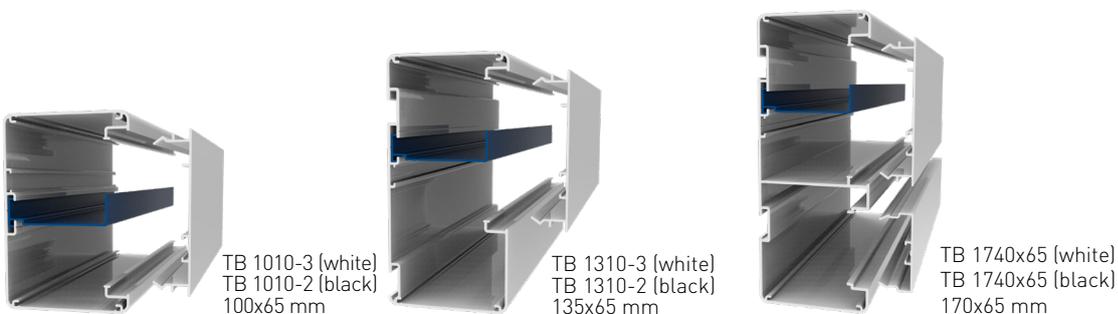

Note!

All corners fit both interior and exterior, and most accessories in our wall trunking systems are common – faster and easier! Switches and additional outlets – see page 27. Calculate window sill channels entirely according to your own preferences using the MP configurator.

Track lightning- Global Trac

Choice of track lightning!

Available in four different lengths in white, black, and gray finishes for both recessed and surface-mounted installation, but in the quick guide, we show surface-mounted. Recommended pendant distance is center-to-center 1 meter, with a minimum height of 2.2 meters. If the track is placed in enclosed spaces, such as a closed display window, it may be positioned lower - however, a minimum of 50 mm above the floor. The Pulse version has the same features as the Pro version but with the ability to handle Dali - 0-10 V, etc.

Service poles – Posts

Standard poles – selection from the standard range.

MP bolagen are the complete supplier of cable installation for electrical and data purposes in buildings. The final distribution to the end-user takes place through MP service poles.

Our goal is to develop the various components into the industry's most functional and integrated systems.

Moulding piece
11 790 42 height 150 mm

Junktion box – 400x400 mm
11 790 34
Min. built-in height 87 mm.

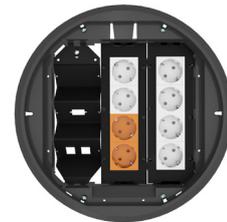

Floor boxes – PUK

Round installation units in plastic with a carpet flange, for dry-cleaned floors and space for 12 units. Filling depth 8 mm - minimum height 65 mm. Built-in dimensions Ø 307 mm. Maximum load 150 kg.

Installation unit – round
11 790 56

Component example

Moulding pipe
11 790 44 height 150 mm

Junction box – 450 x450 mm
11 790 39
Min. built-in height 87 mm.

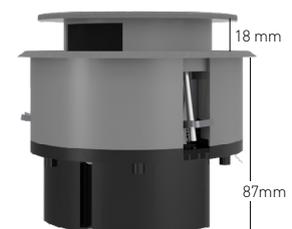

Round installation units – Bodo in plastic and aluminum with a 230V socket and Cat6 STP data outlet - minimum height 87-102 mm. Built-in dimensions Ø 122 mm.

- Bodo N:** 1x230, 1xRJ45 (IP66). Max.load 1500 kg.
- Bodo N4:** 2x230, (IP66). Max.load 1500 kg.
- Bodo T-G:** 1x230, 1x blind. Max.load 150 kg.

Bodo N – aluminum
11 790 50

Bodo N4 – aluminum
11 770 13

Bodo T-G – plastic
11 790 51

Moulding pipe
11 790 40 height 150 mm

Junction box – 160x160 mm
11 790 31
Min. built-in height 73 mm

Floor boxes – PUK

Electricity and data

Mounting box – 4 socket units
11 790 72

Assembly frame – mounting box
11 790 73

230 V-socket outlet
11 790 80 1-way white
11 790 81 1-way orange

230 V-socket outlet
11 790 82 2-way white
11 790 83 2-way orange

230 V-socket outlet
11 790 84 4-way white

Angled front cover – 45x45 mm
11 770 48 for data jacks
2 x keystone.

Assembly frame – data/media
11 790 86

Mounting plate – blind
11 790 87

Mounting plate – AMP SL
11 790 92

Mounting plate – Keystone
11 790 88

Mounting plate – Lexcom/Actassi
11 790 89

Mounting plate – XLR
11 790 90

Mounting plate – D-sub/VGA
11 790 91

Other accessories

Mounting box – low inset depth
11 790 74 for plastic installation unit
(11 790 54).
Fits 8 units for mounting in frame
11 790 54.

Assembly frame
11 790 75 for mounting general
power and data outlets, (fits the
device box above)

USB 3,0 – Keystone
11 792 50

HDMI – Keystone
11 792 51

PHONO 3,5 mm – Keystone
11 792 52

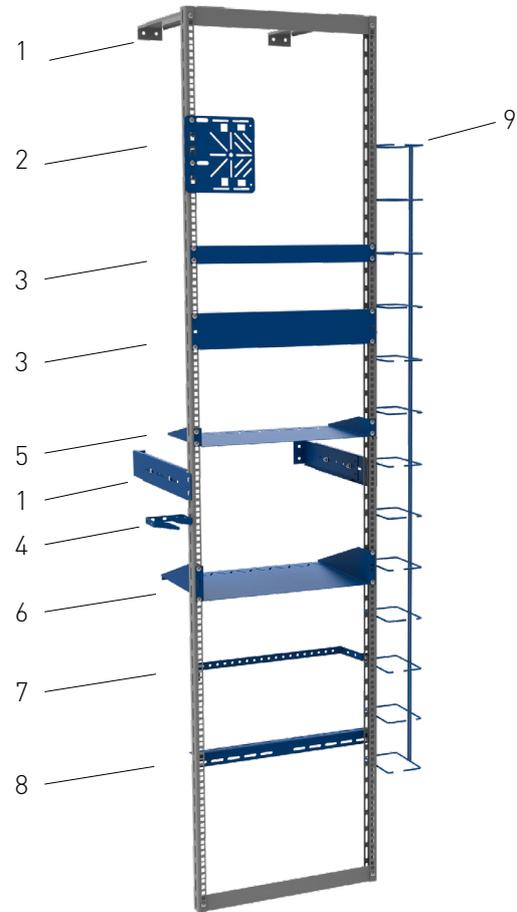

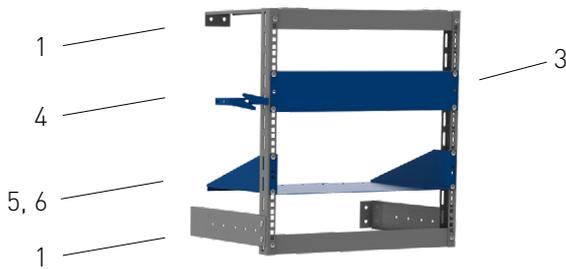

19"-racks

MP-telecom/data racks is mounting kits

assembly kits according to SS IEC 297 for 19" standard = 465 mm center distance between the upright profiles. The assembly is simple and done with screws and nuts. Accessories for the racks are available in several different variants. The racks are available in white painted and galvanized finish with a thickness of 10 µm. The front side has holes for cage nuts M6, and the rear side has holes of 6.5 x 31.75 mm for M6 screws and nuts.

Racks are also available in white painted finish
– see MP catalog.
